Could your data center benefit from PCIe workload acceleration based on NAND Flash solid-state storage technology?

HP PCIe Workload Accelerators for ProLiant ML/DL/SL Server series are PCIe card-based direct-attach solid state storage technology solutions for application performance improvement. They offer excellent latency and enterprise reliability for improving an individual server's throughput, and allow you to implement up to ten times the number of virtual machines compared to typical virtualization environments. With significant energy savings and a reduced footprint, your total cost of ownership will be lower.

Performance constrained applications such as on-line transaction processing (OLTP), virtual desktop infrastructure (VDI), or Big Data will greatly benefit by adding a PCIe Workload Accelerator to their server.
