Optimize your HP Business Notebook performance with HP Memory. Random Access Memory (RAM) temporarily stores information from your operating system, and applications and data that are in current use. This allows your processor to easily access the critical information that makes your programs run. More RAM allows you to run more programs simultaneously and makes it easier to toggle between programs.

- Easiest way to boost system performance.
- Faster start-up times with fewer delays during routine operations.
- Permit easy toggling between several open applications.
- Avoid system downtime, data losses and financial impact caused by memory failures.
- Less frustration with fast evolving software needing more and more memory bandwidth.
